The Scandinavian Cruiser 30

The SC 30 offers beautiful classic design, latest technology, day-sailing functionality at a reasonable price. The SC 30 target sailors who find her the most beautiful boat available, and who do not mind the attention the SC 30 will get in the yacht club or on the water.

Sailing performance

The low-drag, lightweight hull of the SC30 accelerates faster than most other keelboats in her class. She will point higher because of her modern high aspect underwater appendages and narrow hull. The SC30 is stable because of her deep and heavy lead keel bulb. She is extremely well balanced and controllable at any angel of heel, and her hull shape is designed to improve the keel lift while heeled over as her bow goes up slightly.

Single-handed or with crew

The SC 30 can be sailed by one or two people, raced by two or three people, and cruised comfortably on a sunny day by four people.

Use of technology

The SC 30 will be equipped with a tapered oval carbon fiber wingmast, further improving the aerodynamic performance of the rig. She also comes with a carbon fiber lifting keel and lifting rudder, making it easy to trailer her. A trailer winch will lift the keel.

Comfortable daysailer

The SC30 is not just a performance yacht but also a comfortable daysailer. Many ladies are hesitant about going sailing in small one-design boats because of the absence of facilities. This is why we added a portable toilet. The SC 30 also comes with a "day-bed" which can also be used for storage of cushions and sails.

Recapture the essence of sailing...

"The SC 30 is designed to be very long, low, narrow, extremely light, with very little water resistance and very good stability."

Nis Peter Lorentzen
